**VOLUNTARY ANNOUNCEMENT**  
**INITIATION OF RANDOMIZED, BLINDED AND COMPARABLE**  
**VACCINE-CONTROLLED PHASE III CLINICAL TRIAL OF**  
**23-VALENT PNEUMOCOCCAL POLYSACCHARIDE VACCINE**

This announcement is made by AIM Vaccine Co., Ltd. (the “**Company**”, together with its subsidiaries, the “**Group**”) on a voluntary basis to inform shareholders and potential investors of the Company of the latest business developments of the Group.

The board of directors of the Company (the “**Board**”) is pleased to announce that on August 28, 2023, the randomized, blinded and comparable vaccine-controlled Phase III clinical trial of the Group’s 23-valent pneumococcal polysaccharide vaccine was initiated at the Centre for Disease Control and Prevention of Nanbu County, Sichuan Province. The study will be conducted at two sites in Sichuan Province and one site in Shandong Province and is expected to enroll 1,920 healthy subjects aged two years old and above.

The Phase I clinical trial of the 23-valent pneumococcal polysaccharide vaccine had been initiated in December 2021 at the Centre for Disease Control and Prevention of Nanbu County, Sichuan Province. The results of the safety and immunogenicity analysis that have been obtained to date indicate that the product has a favorable safety profile and shows good immunogenicity.

The 23-valent pneumococcal polysaccharide vaccine is indicated for the prevention of invasive pneumococcal diseases in age groups above two years old, especially those above 60 years old. The vaccine contains 23 types of pneumococcal serotype polysaccharide antigens, which can prevent pneumonia, meningitis, otitis media and bacteremia caused by pneumococcal infections, covering nearly 90% of the serotypes most commonly reported to cause pneumococcal diseases.

By order of the Board
